

F3200 Metal Screen Filter with Hydraulic Operation (Automatic)

Operating Guidelines

Maximum working pressure: 8,0 bar

Maximum pressure: 10,0 bar

Ordering Information

Screen options: 100, 130, 200 micron

Body styles: angled, parallel, parallel long

F3200 Metal Screen Filters with Hydraulic Operation are the ideal choice for applications without AC electricity. The F3200 Filters utilizes continuous movement of the collector assembly to remove particles. The standard housing of the filter is made of carbon steel with a 120 micron protective coating of extra durable polyester, applied electrostatically and oven cured on a zinc-phosphate layer, and a sintered screen to provide maximum anti-corrosion protection both internally and externally.

The F3200 Metal Screen Filter with Hydraulic Operation is used as a primary filter for water containing large quantities of dirt; up to 50 ppm and from water sources such as rivers, lakes, wells, and recycled water. These filters are self-cleaning and continue to operate during the flushing cycle
